The preform infeed with heating section.

The bottle after blow moulding.

The filling and screw capping section.

Transfer to labelling section.

## Technical Specifications

### PET stretch blow moulder (automatic):

- Machine can be equipped with moulds from 0,5 to 10 l.
- Capacity of machine depends on numbers of cavities (1-4).
- Rotating heating section for PET preforms heating with infra-red heating system
- PET preforms transfer to bottle mould
- Cooling device for mould cooling
- Automatic bottle transfer to conveyor of filling plant
- SIEMENS S7 PLC with touch panel
- Screw compressor

### Filling plant with filling:

- Stainless steel water tank
- UV tunnel, installed before bottle filling for bacterial safety of PET bottle
- Radiators at each filling position for sterilizing drinking water
- Automatic filling unit screw capper including sorter for bottle caps
- Labelling coding unit according to requirements
- Bottle discharge conveyor towards container exit
- Solid construction with plastic doors and accident precaution

### Options:

- Electric generator (diesel) with approx. 32 kW capacity for electric power supply installed machines and accessories in container
- Air conditioning equipment for temperatur control
- Water treatment plant
- Packaging machine

The optional power generator.
